

FF-V08-20-BA-XXX

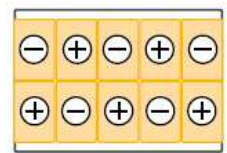

Definition

Fabric pouches, cut out using ultrasound, on which an imprint, heat sealed also using ultrasound, provide a housing for a Magnet Block.

Shaped Sheaths are delivered in sets of two pouches, equipped with magnet blocks and ready to be fitted onto the final product.

Characteristics

- Alternating polarity (Patent No. 0151503) giving the clip a power 8 to 10 times greater than in the case of a single larger magnet (at equal volume).
- High stretch factor, enabling high product flexibility
- Operating temperature: -50°C to +100°C
- Very high resistance to humidity and immersion (washing machine)
- Our magnets do not trigger airport scanners (very low iron content)
- Sold individually
- TARIC: 8505110033

Magnet blocks
Alternate polarities

Composition

Magnets Block

- Permanent magnetic ceramics made from Rare Earth (Neodymium-Iron-Boron)
- Dimensions: 6x4x1.5 mm,
- Passivated zinc galvanisation (anti-corrosion coating)
- Colour Yellow-Green
- Silicone-based glue
- Strip of Polyurethane film (PU base)

Fabrics

100% Polyamide

Colours

- Black
- White
